We are currently accepting applications for a Project Manager in our Product Qualification Testing Division.

Responsibilities include:

Structuring, execution, and management of programs for product qualification testing as well as supervision of on-going quality control compliance testing.

Qualifications

Typically a Bachelor's Degree in an engineering discipline; applicable experience may be substituted for degree. Candidate must possess: the ability to use Microsoft Windows operating system and Office applications, ability to follow instructions and document activities, working knowledge of laboratory test standards and protocols. Excellent management, communication (both written and oral) and writing skills.

Technical experience in the areas of; materials testing, construction practice, or laboratory experience are a plus. Experience with Data Acquisition Systems is highly desired. Machining, fabrication, and wood working experience a plus. Candidates' education, skill set, and experience will be considered in our evaluation.

Duties

The Project Manager works directly with clients to develop test program scope specific to their desired goals. He/she interfaces, as necessary, with product evaluation agencies, to determine the appropriate test procedures for evaluating a given product. His/her duties include, but are not limited to, the following:

Test proposal and contract development, scheduling and staffing of test programs, developing SOP's (Standard Operating Procedures), training test technician on new test procedures, supervising tests, reducing and analyzing test data, and test report writing.

Benefits:

We offer medical, dental, and life. Paid vacations and paid holidays.
